EDUCATION

University of California, Los Angeles (UCLA)

Cognitive Science B.S.; Data Science Engineering Minor

- **Coursework:** Natural Language Processing, Machine Learning, Artificial Intelligence, Neural Network Lab, Prototyping Intelligent & Interactive Systems, Databases, Algorithms and Complexity, Computer Science I/II
- **Dean's Honors List:** Spring 2024 – Spring 2026

TECHNICAL SKILLS

Languages: Python, Java, C/C++, SQL, R

Frameworks: FastAPI, Spring Boot, REST APIs, vLLM, Ollama

AI/ML: NumPy, Pandas, Matplotlib, Scikit-learn, PyTorch, Reinforcement Learning, Fine-Tuning

Tools & Technologies: Git, HuggingFace, OAuth 2.0, Okta, Apache Kafka, Supabase, Mermaid, Docker

EXPERIENCE

Software Engineer Intern | Labcorp

Jun 2026 – Present

- Built a Kafka-to-Oracle data pipeline to consume, process, and store streaming events, enabling automated real-time data collection and persistence
- Designed and prototyped an Agentic AI workflow for natural-language test-result search, orchestrating communication between LLMs and backend services to ensure reliable and secure results

Undergrad Researcher | UCLA Human-Computer Interaction (HCI) Research Lab

Oct 2024 – Present

Reinforcement Learning Hypothesis Evaluation Agent

- Designed and implemented a plausibility reward model for scientific hypothesis generation, including expert-labeling protocols, an annotation UI, and model fine-tuning and evaluation on a 7K-example dataset.
- Developed and benchmarked a multi-model baseline suite across Qwen, Llama, OpenAI's o3, and two biomedical LLMs; conducted controlled ablations of reward and base models to quantify their impact on generation quality.

HALO: Human-AI Collaborative Ligand Optimization

- Developed molecular generation platform, integrated large language models (LLMs), API routing, and database logging
- Built pipeline to effectively filtered out 80% of low-quality molecules generated, improving system efficiency and usability
- **UIST 2026 (Accepted)**

RAGPPI: RAG Benchmark for Protein-Protein Interactions in Drug Discovery (aclanthology.org/2026.eacl-long.203/)

- Analyzed expert-revised responses and model outputs to guide model improvement and conducted GraphRAG benchmarking
- Prepared 50 sets of user study documents and designed figures/tables to effectively communicate experimental results
- **EACL 2026 (Accepted)** - Main Conference

Research Assistant | National Taiwan University HCI Lab

Jun 2024 – Sep 2024

- Contributed to backend development of AI-assisted interior design image generation tool to support communication between designers and clients.
- Evaluated performance of Segment Anything Model, IP-Adapter, ControlNet for image processing; debugged multi-model integration, improved image processing pipeline, accessed and managed AWS S3 files and data.

ACTIVITIES

Association for Computing Machinery at UCLA

AI Co-President

Mar 2026 – Present

- Lead team of 40 officers and advisors to organize workshops, speaker events, and projects for 200+ active members

AI Officer

Apr 2025 – Mar 2026

- Organized technical and academic events, including 2 hackathons and 3 academic panels, connecting over 250 attendees
